Is a Sheltie a good family dog? Yes, Shelties are generally known to be great family dogs. They are

intelligent, loyal, and affectionate and tend to bond closely with their families. They are good with children and other pets, and they are also eager to please and easy to train. However, like all breeds, individual temperament can vary, so it's important to meet and spend time with a Sheltie before bringing one into your home to ensure they are a good fit for your family. Is Shetland Sheepdog high maintenance? Yes, Shetland Sheepdogs can be considered high maintenance in terms of grooming and exercise needs. They have a thick double coat that requires regular brushing and grooming to prevent matting and tangles. They are also active and intelligent dogs that require regular mental and physical exercise to prevent boredom and destructive behaviors. Additionally, Shelties are prone to certain health issues such as progressive retinal atrophy and hip dysplasia, so regular vet check-ups and preventative care are important to keep them healthy. Do all Shelties bark a lot? Shelties are known to be vocal dogs and they often bark as a way to communicate. However, excessive barking can often be discouraged through proper training and socialization. While some Shelties may bark more than others, not all Shelties bark excessively. With proper training and socialization, it is possible to manage their barking behavior. What are the health issues with Shelties? Shelties, or Shetland Sheepdogs, are generally a healthy breed but they can be prone to certain health issues, including: 1. Collie eye anomaly: a genetic eye disorder that can lead to vision problems or blindness. 2. Hip dysplasia: a condition where the hip joint doesn't fit together properly, leading to arthritis and lameness. 3. Von Willebrand's disease: a bleeding disorder that affects the blood's ability to clot properly. 4. Progressive retinal atrophy: a degenerative eye disease that can lead to blindness. 5. Hypothyroidism: a condition where the thyroid gland doesn't produce enough hormones, leading to weight gain, lethargy, and skin issues. 6. Dermatomyositis: a genetic autoimmune disease that affects the skin and muscles, causing skin lesions and muscle weakness. 7. Gastric torsion: also known as bloat, a life-threatening condition where the stomach twists and becomes distended with gas, cutting off blood supply to the stomach. It is important for Sheltie owners to be aware of these potential health issues and to work closely with their veterinarian to monitor and address any concerns. Regular check-ups, proper nutrition, exercise, and a healthy lifestyle can help prevent or manage many of these conditions.
